TECHNICAL SKILLS

AI & LLM Integration

OpenAI API, LLM API integration, RAG pipelines, embeddings, vector databases (ChromaDB), prompt engineering, AI agents, human-in-the-loop workflows

Automation & Integrations

REST APIs, webhooks, Make, Zapier, Google Sheets automation, API-driven workflows, structured LLM outputs

Development

Python, JavaScript (ES6+), TypeScript, React, Next.js, HTML, CSS, Tailwind CSS, Bootstrap, Vite

Data & Platforms

PostgreSQL, Supabase (Auth, Storage, Row Level Security), Neon, Drizzle ORM, ChromaDB, Git, GitHub, Netlify, Vercel

AI-Assisted Development

Claude Code, Codex, GitHub Copilot, Lovable, Bolt.new, Gemini, Grok

LANGUAGES

Bulgarian — Native

English — B2

Stefan Badev

Junior AI & Automation Developer

LLM Integrations · RAG · Workflow Automation · Full-Stack Development

PROFESSIONAL SUMMARY

Junior developer focused on AI integrations, RAG systems and workflow automation, with full-stack ability in JavaScript/TypeScript and Python. Two years of AI development training through SoftUni and self-directed study, applied across multiple hands-on projects, including deployed full-stack and web applications. Earlier career in client-facing technical support, testing and communication, with years of independent responsibility for client delivery. Seeking a first developer role in AI integrations, automation, or AI-enabled products.

SELECTED PROJECTS

PDF AI Assistant — RAG-based document question answering

GitHub

- Built a complete RAG pipeline: PDF text extraction, chunking, OpenAI embeddings, ChromaDB vector store, similarity search, and LLM-generated answers grounded in retrieved context
- Added multimodal output — text response, generated image, and audio via text-to-speech
- Developed and tested end-to-end in Python

Stack: Python, OpenAI API, text-embedding-3-small, ChromaDB, pypdf, gTTS, Pillow

AI Career Project Strategist — multi-agent workflow

GitHub

- Built a multi-step agent workflow that analyses user input, plans project improvements, reviews its own output, and returns structured recommendations
- Implemented agent tools, memory, and a human-in-the-loop review step between planning and final output
- Designed for structured, parseable output rather than free-text responses

Stack: Python, LangGraph, LangChain, OpenAI API

Chefo's Recipes — full-stack recipe platform

Live Demo | GitHub

- Built a monorepo recipe platform with a Next.js web app, an Expo React Native client, shared TypeScript types, and a separate database package
- Implemented database-backed recipe management with Neon PostgreSQL, Drizzle ORM, API routes, and role-based access
- Developed responsive recipe browsing, detail views, favourites, and admin management foundations

Stack: Next.js, React, TypeScript, Tailwind CSS, Expo, Drizzle ORM, Neon PostgreSQL

EDUCATION

Master's degree
Public Relations, Advertising & Applied Communication
Sofia University "St. Kliment Ohridski"

Bachelor's degree
Pedagogy
Sofia University "St. Kliment Ohridski"

ADDITIONAL TRAINING

Linux System Administration
Software University · 2021–2022

Computer Networking Fundamentals
Software University · 2021

Programming Basics with Java
Software University · 2022

Quality Assurance
Skillo Software Academy · 2020

Web Development
Software Academy "Net IT" · 2019–2020

SELECTED PROJECTS (continued)

FreshBox — e-commerce web app with Supabase backend
Live Demo | GitHub

- Multi-page e-commerce app: product catalog, search and category filtering, cart, checkout, order history, and an admin panel for product and order management
- Supabase backend using PostgreSQL, Auth, Storage and Row Level Security to enforce role-based access control
- Deployed on Netlify from GitHub

Stack: JavaScript, Vite, Bootstrap 5, Supabase, PostgreSQL, Netlify

PROFESSIONAL EXPERIENCE

Independent Contractor — Renovation & Maintenance · Self-employed
2023 – Present · Sofia, Bulgaria

Project-based renovation and maintenance services for private clients. Client communication, scoping, scheduling, procurement and delivery, with full responsibility for execution. Building software in parallel since 2024.

QA Tester · uTest (crowdsourced testing platform)
2020 – 2023 · Remote

- Web and UX/UI testing cycles; bug documentation and test reporting
- REST API validation with Postman; defect tracking in Jira

Technical Assistant · Euroland EOOD
March 2018 – February 2019 · Sofia, Bulgaria

- IT administration and user support; hardware and software troubleshooting
- Digital documentation and internal digitalisation support; system and network monitoring

Library Assistant · National Library
2008 – 2017 · Sofia, Bulgaria

Customer support, catalogue management, digital records, and technical assistance for library users.

CERTIFICATIONS

SoftUni — AI Development track

Full-Stack Apps with AI	June 2026
AI Agents and Workflows for Developers	May 2026
AI Integrations for Developers	February 2026
Software Technologies with AI	January 2026
AI-Assisted Development	January 2026
AI Automation	December 2025
Introduction to Programming with AI	October 2025
Prompt Engineering & AI Tools	November 2024
